

Addendum to the quick start guide for USB Screen Mirroring Operation

1. To return to main menu from USB Mirroring mode, touch the screen so that you can see the small square white icon at the left bottom corner. Pressing the icon will display the Home icon and Audio Mix, Main Volume and Reconnect buttons on the top of the display.

2. **Home Icon** -- Return to Home Menu.

3. Audio Mix

You can press Audio Mix to turn this feature on or off. When turned on, Audio Mix turns blue.

The Audio Mix feature is used to listen to other sources such as AM/FM radio, microSD or Aux inputs in the background while mirroring your phone to the screen.

4. Main Volume and Mix Volume Level Control

You can press the Main VOL:12 icon to choose what source volume you want to control.

Main Vol will adjust the volume on the other source (AM/FM radio, microSD or Aux input) and Mix Vol will control the volume on the sound coming from your mirrored phone.
